

Disaster Risk Financing

Financial protection policies and instruments support governments in becoming effective risk managers and help protect lives, livelihoods, investments and development progress. Early action supported by pre-planned financing not only saves lives but also reduces costs, with every R1 spent on early action saving up to R5 in late response financing.

The Research Alliance for Disaster and Risk Reduction (RADAR) and Stellenbosch University Business School (USB) are pleased to announce a **certified one-day online short course** on the **Fundamentals of Disaster Risk Financing**.

Aims

The course aims to introduce participants to key concepts and instruments used in financing of disaster shocks. It will also provide a forum for participants to engage with best practice in this area.

Outcomes

By the end of the course participants will be equipped to reflect on lessons for managing disaster risk and disaster financing within their own contextual environments. Participants will also understand how to advocate for disaster risk management and its financing with key stakeholders.

Cost and dates

The programme will run on **14 August, 2020**. It costs R 1 350, all inclusive.

Members of DMISA receive 1 CPD point on successful completion of the course. Other professional bodies may also award CPD points for learning & development.
